

BUILT TO LAST

The For2Fi Advantage

For2Fi's POTS line replacement solution isn't just a technical upgrade. It's a full-scale modernization of how POTS lines are deployed, managed, and supported, without adding complexity to the install process.

Whether you're deploying one line or a thousand, the experience is consistent: professional, compliant, and built to last. This is a field-proven, future-ready system designed to replace legacy infrastructure and deliver reliability, regulatory compliance, and cost-efficiency at scale.

This isn't just a hardware swap. It's a full-stack transformation of how critical lines are delivered and supported. Designed to perform and built to be trusted.

The difference between selling a product and selling peace of mind is the whole experience: how it's deployed, how it's supported, and how it performs over time.

For2Fi's POTS line replacement solution is designed for today's installs and tomorrow's networks.

Simple Setup

Our solution integrates seamlessly with existing infrastructure for a smooth transition.

Fast

The new system can be up and running faster than you think - with minimal downtime.

Secure & Reliable

We meet key standards like PCI, HIPAA, and NFPA 72, ensuring regulatory compliance and 99.999% uptime.

Many resellers are forced to choose between what's easy to install and what's compliant. For2Fi eliminates that tradeoff by offering full regulatory support and universal hardware compatibility.

Scalable, Secure, and Simple to Manage

Once installed, every line is visible through a centralized management platform. Remote access tools give your team control without sending a truck.

- 4G/5G ready with multi-carrier SIM support
- Secure cloud management with real-time alerts and reporting
- Over-the-air updates and remote troubleshooting
- Scales easily across multi-site deployments

Deployment That Works in the Field

Fast installs don't mean much if they fail later. For2Fi's solution is pre-configured, compact, and rugged—built to handle varied environments with minimal effort from the field team.

- Small form factor, wall-mountable, and hardened for edge deployments
- Indoor and outdoor enclosures available
- Optional battery backup and external antenna support
- Zero-touch provisioning and flexible mounting options

THE LONG-TERM PAYOFF:

- ✓ **Fewer service calls and escalations**
- ✓ **Reduced truck rolls and operational costs**
- ✓ **Faster service restoration if a single component fails**
- ✓ **Peace of mind that the install will work now and five years from now**

Our solution isn't just built for technical compliance. It's built for confidence. From day one, our team works to make every deployment seamless. We provide pre-configured hardware, guided onboarding, and responsive, expert support that continues well after installation. We've replaced tens of thousands of lines across North America and beyond, and our experience shows in every detail.
