End-to-End Service. Built In.

Plenty of vendors say their POTS replacement is "easy." But when it comes to real-world deployments, most stop at the box. That leaves everyone scrambling to fill the gaps, coordinating logistics, chasing down support, and managing service issues that should have been solved from the start. For2Fi actually delivers on the promise of easy. Not just by perfecting the hardware, but by building a full-service experience around it.

With For2Fi, you're not just getting a device.
You're getting the power of a complete Communications Platform as a Service (CPaaS), designed to support the entire lifecycle of your deployment.

CPaaS
Our platform offers a robust and customizable backend for easy integration and deployment. We enable transition from traditional POTS lines to digital and wireless solutions with minimal disruption.

Professional Logistics and Field Services

Great installs don't happen by accident.

(For2fi is supported by a top-tier logistics and services team that's delivered nationwide technical deployments for over 20 years.
That means:

- Pre-staged, kitted, and tested hardware shipped from secure U.S. facilities

- 3PL warehousing that follows your processes and procedures

- 3000+ certified technicians trained on POTS replacement and code compliance

- Field dispatch, tier-1 troubleshooting, and ticket escalation protocols ready to go

Whether you're rolling out a single alarm line or coordinating hundreds of elevator retrofits, our services team ensures that installs go smoothly, hardware arrives ready, and customers stay satisfied.

Adapt. Overcome. Execute. Document.

The phrase "Adapt and overcome" became widely known after Clint Eastwood's character in Heartbreak Ridge declared, "You're Marines now. You adapt. You overcome. You improvise." That same mindset drives our approach to support.

From field services to troubleshooting, our team is trained to think clearly, act quickly, and document everything. We solve problems before they become issues, and we make sure your customers experience seamless service every step of the way.

And if something breaks or changes months later?
We're still there with same-day field support and remote diagnostics that keep your customers up and running.
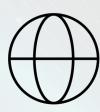

Real Partnership, Not Just Product
At For2Fi, success doesn't end at the sale. We work directly with your engineering, ops, and sales teams to make sure rollouts are sustainable, scalable, and fully supportable.

From first install to long-term management, we provide the tools, infrastructure, and expert support that resellers need to scale with confidence. This includes preconfigured hardware, remote monitoring tools, nationwide technical services, secure network infrastructure, and 24/7 support all tightly integrated to deliver a seamless experience for you and your customers.

For2POTS

WHERE OUR SOLUTION SHINES: USE CASES

Universal Replacement Solution:
Our Next Generation POTS lines are compatible with all legacy equipment.

Commercial Buildings:
Enhances safety systems with compliance features (NFPA, E911), ensuring operational reliability.

Government and Public Safety:
Supports critical communication needs with robust, secure infrastructure and compliance.

Residential Applications:
Security Systems, Gate Access, Voice lines, Fax Machines.

Healthcare Facilities:
Guarantees compliance with HIPAA and PCI for secure, reliable medical and emergency communications.

Enterprise Organizations:
By reducing service disruptions and ensuring smooth customer management many clients experience instant monthly savings by switching to our solution. Customers can save anywhere from 50 to 1,000%, eliminating connectivity issues and peak-hour interruptions.

Retail Chains:
By creating smooth operations for payment processing and minimizing downtime across all locations our solution enables seamless customer interactions and better business operations.
